

1930-31 Roadster, Phaeton & Roadster PU Bodies

Fits Original or Reproduction 1928-31 Frames

1931 Roadster Body
Stock Firewall, Stock Cowl
Outside Hinges, Rumble Lid

Wescott Quality Fiberglass, Steel Reinforced

The Wescott Model A roadsters, phaetons and roadster pickup bodies are the finest reproduction bodies available. All the original body lines have been retained. All doors and deck lid come installed, and open and close solidly.

Wescott uses high quality, hand laminated fiberglass and extensive steel reinforcement to make a strong, straight and clean fitting body.

Doors

Outside or Hidden Hinges

'28 Style or '29-'31 Style Handles

The doors are fitted and mounted to the body with hinges, latches, striker plates, dovetails and dovetail sockets installed. Tabs for mounting outside door handles and door check straps are provided on the steel structures installed in the doors.

Stock or hidden style door hinges are available. Wescott hidden hinges are specially designed for our Model A Roadster and Phaeton bodies and only protrude minimally (about 1/4") inside of the door posts. Wescott doors open and close solidly due to the extensive steel framework. 1928 style (inside handle only) or 1929-31 style (uses outside and inside handle) door latches are available.

Dash

4 Dash Panel Options

A removable fiberglass dash panel is installed in the body. The following styles are available:

Stock Firewall, Working Cowl Vent,
Hidden Hinges

Cowl

Filled Cowl, Dummy Fill Neck, or Working Vent
Wescott Model A bodies are available with a molded smooth cowl top, a cowl top with dummy filler neck, or (at extra cost) a cowl vent. The cowl vent is fully working with the hinge, adjustment ratchet, and tension spring installed and the drip channel around the vent opening.

Deck Lid (Roadster)

Rumble or Trunk

Stock or Remote Latch

On the Roadster, the deck lid is fitted and mounted to the body with the hinges, latch, striker, and rubber bumpers installed. The body can be ordered with the deck lid hinged as a rumble

lid or as a trunk lid. A stock style (for use with outside handle) or remote operated type deck latch is installed. The remote latch does not include operating cables or linkage. Trunk hinges are a Wescott's designed high lift style for ease of opening and adjustment. All drip channels are installed on the body around the deck lid opening.

Seat (Roadster)

The roadster body does not include the front seat platform or riser. If original type seats are to be used order separately the seat platform (A-121-B) and riser (A-123-B). These can be installed set back approximately 2" for extra leg room when a recessed firewall is used. All upholstery tack wood is installed in the body.

Built-in internal steel for safety & strength

Fabricated box tubing "cage" completely surrounds cockpit

Cross-bracing of cowl and quarter panels, plus solid hinge mounts, creates exceptional rigidity and door alignment control

Doors and deck lid are constructed with two fiberglass panels encasing an inner steel framework

Hardware mount tabs provided on steel framework to protect stress areas:

- Door hinge mounts
- Door latch mounts
- Door handle mount tabs
- Door check strap mounts
- Trunk or Rumble hinge mounts
- Windshield post mounts
- Top mount locations on steel frame

Seat (Phaeton)

Front Seat Back Stock or Setback

On the Phaeton, the front seat back is installed and is available with stock setback or with a 3" extra setback. We recommend the seat set back for extra leg room, especially with the recessed firewall. The front seat platform (A-121-B) is not included and can be ordered separately if an original type seat is to be used. All upholstery tack wood is installed in the body.

Wheelwell (Phaeton)

Stock or Wide

The rear wheelwells are available stock or with a mini-wheel tub to fit the stock coupe rears allowing extra tire room with a stock frame.

Top Mount (Phaeton)

Top mount studs are included with the body but are not installed. Plates are installed in the steel reinforcing for mounting top studs and top rest saddle studs (not included with body.)

Firewall

Stock or Recessed Firewall

Wescott firewalls are molded using a fire retardant resin. The recessed firewall is a minimum recess design for small block Chevy V8's, with a 1 1/2" recess on the left side, 2 1/2" on the right side, and 4" in the center. This will leave more legroom than any other recessed firewall and still allow a HEI distributor to be used. The stock firewall looks like an original and will work with most 4 cylinder and V6 engines. Radiator rod mounting brackets are installed to the upper firewall.
